Neuromuscular Control — 8 minutes

KEEBRA PARK GRLA — YEAR 7 · LEVEL 1.1

PHASE 1 — ESTABLISH
Runs before every session
Gym or field

WHY THIS RUNS FIRST

Fifteen minutes is the evidence-based dose; eight minutes done *every* session beats fifteen done sometimes. Slow and deliberate — this is motor learning, not conditioning. It is the last thing you cut and the first thing you keep, and it runs in full even on an amber day.

1 · RAISE 90 seconds

	EXERCISE	DOSE	COACHING CUE
1	**Skip / bike / 10m shuttles**	**60–90 sec**	Just enough to warm, not to tire.
2	**Inch Worm**	**3 reps**	Walk the hands out, hips stay level.
3	**Walking Lunge**	**5 e/s**	Tall chest, back knee under the hip.

2 · THE SPINE every session · all levels · no exceptions

	EXERCISE	DOSE	COACHING CUE
1	**Low Box Step-Down (15–35 cm)**	**2 × 6 e/s**	Lower slowly, knee over the 2nd toe, touch light, return.
2	**Jump & Stick Landing**	**5 jumps**	Land soft and quiet, hips back, HOLD 2 seconds.
3	**Neck Iso Holds — 4-way**	**1 × 10 sec e/way**	Front, back, both sides. Brace before contact.

3 · PHASE 1 — ESTABLISH pick 3 per session · rotate so the block covers all six

	EXERCISE	DOSE	COACHING CUE
1	**Supine Heel Slide Walkout**	**2 × 6 e/s**	Push the heel into the floor, slide slow, hips do not drop.
2	**Single Leg Glute Bridge**	**2 × 8 e/s**	Drive through the heel, squeeze at the top, hips level.
3	**Clamshell**	**2 × 10 e/s**	Hips stacked, lift the top knee without rolling the pelvis back.
4	**Prone Hip Extension**	**2 × 8 e/s**	Squeeze the glute BEFORE the leg lifts. Slow.
5	**Dead Bug**	**2 × 6 e/s**	Lower back stays flat on the floor, breathe out on the effort.
6	**Single Leg Balance**	**2 × 30 sec e/s**	Soft knee, eyes forward, adjust without looking at your feet.

PHASE 1 — ESTABLISH	PHASE 2 — LOAD	PHASE 3 — INTEGRATE	PHASE 4 — EXPRESS
Lvl 1.1–1.3 · bodyweight, on the floor, slow	Lvl 1.4–2.2 · bands, more reps, tempo	Lvl 2.3–3.2 · single-leg demand, unstable surface	Lvl 3.3–3.8 · reactive, at speed, full intent

Phase follows movement quality, not age or year level. She moves up when she is controlled and stable at the phase she is in — not when the calendar says so.

WHO NEEDS WATCHING — KNEE POSITION, PELVIS LEVEL, QUALITY UNDER FATIGUE

Equipment: bands (light/medium/heavy) · low box 15–35 cm · foam pad

CARE · ACCOUNTABILITY · RESPECT · EXCELLENCE
